SUMMARY

Data Science graduate from Purwadhika with a Bachelor's degree in Communication Science. Combines analytical data skills (Python, MySQL, Tableau) with strong communication abilities to transform data into actionable business insights. Experienced in end-to-end data processing, EDA, and predictive modeling through hands-on projects.

PROJECT EXPERIENCE

Cartify E-Commerce Customer Churn Analysis & Prediction

- Built an XGBoost churn prediction model with threshold optimization (0.38), achieving F2-Score 0.89 on test data — prioritizing recall to minimize undetected churn cases.
- Identified key churn drivers using SHAP beeswarm analysis, providing interpretable feature importance for business stakeholders.
- Developed a 3-tier risk segmentation system (Low / Medium / High Risk) from model probability scores, enabling retention teams to prioritize treatment by urgency level.

Syarah.com Second Car Price Prediction

- Built a machine learning regression model to predict used car prices on the Syarah.com marketplace, providing an objective price benchmark for sellers and buyers
- Applied full ML pipeline including categorical encoding, numerical scaling, multi-algorithm comparison, and hyperparameter tuning to optimize model generalization
- Reduced pricing inefficiency risk for marketplace sellers by providing an objective price benchmark based on vehicle specs, brand, transmission, engine capacity, and region

SaaS Software Sales Performance Analysis

- Conducted diagnostic analysis on a multi-country SaaS sales dataset to identify structural drivers of revenue performance and customer retention
- Analyzed key business metrics including sales performance, customer retention, discount utilization, and product profitability.
- Designed data visualizations to effectively communicate complex geographical sales trends and revenue metrics to non-technical stakeholders.

Superstore Customer Retention Analysis

- Analyzed historical customer purchasing behavior by implementing cohort retention analysis to measure user lifecycle and loyalty over time.
- Created visual retention trends and matrices using heatmaps and line plots to simplify trend tracking for operational evaluations.
- Delivered insights and recommendations to support customer loyalty and repeat-purchase strategies.

Motorcycle Spareparts Inventory System

- Developed terminal-based CRUD (Create, Read, Update, Delete) applications using Python to manage product inventory for an online motorcycle spareparts marketplace
- Designed data structures and workflows to manage product information, stock control, supplier records, and purchasing transactions.
- Applied Python fundamental programming concepts including modularization, functions, loops, and conditional logic.

Project Link : [saddamfachriza/Motorcycle-Spareparts-Inventory-System](https://saddamfachriza.github.io/Motorcycle-Spareparts-Inventory-System)

Gasoline Shop and Station Inventory System

- Developed terminal-based CRUD (Create, Read, Update, Delete) applications using Python to manage product inventory for a gasoline station.
- Designed data structures and workflows to manage product (Gasoline, Diesel, Oil product), stock control, and transactional operations.

- Applied Python fundamental programming concepts including modularization, functions, loops, and conditional logic.

Project Link : [saddamfachriza/Gasoline-Shop-and-Station-Inventory-System](#)

WORK EXPERIENCE

PT. Prima Alkesindo Nusantara (Aug 2024 - Jul 2025)
Office Administration

- Managed and organized company files, records, and operational datasets to maintain structured documentation.
- Responded to inquiries from internal marketing teams and clients while ensuring accurate record keeping.
- Processed and tracked E-Catalog orders using structured spreadsheets (Excel/Google Sheets), maintaining transaction records to support monthly operational reporting.

Pergikuliner Event (Apr 2024 - Jun 2024)
Event Marketing Internship

- Assisted in coordinating tenant participation and managing communication related to event activities.
- Prepared promotional materials including banners, posters, and social media content to support event marketing.
- Monitored event activities and documented event outcomes to support internal evaluation and reporting.

Ministry of Marine Affairs and Fisheries (Jun 2022 - Aug 2022)
Social Media Planner Internship

- Developed weekly Instagram editorial plans based on content strategy and campaign objectives.
- Monitored audience engagement including comments and interactions to understand audience behavior.
- Evaluated content performance and summarized insights to support future content planning.

EDUCATION

Purwadhika Digital Technology School (2025 - 2026)
Data Science & Machine Learning

Kalbis Institute (2019 - 2023)
Communications Science, 3.49/4.00

CERTIFICATION

Purwadhika Digital Technology School (Jun 2025)
Data Science & Machine Learning
Link :

SKILLS

Hardskills	Python Programming, SQL Database & Query, Exploratory Data Analysis (EDA), Data Cleaning & Preprocessing, Data Wrangling, Data Visualization, Statistical Data Analysis, Machine Learning.
Softskills	Analytical Thinking, Problem Solving, Data Storytelling & Communication, Team Collaboration, Adaptability.
Tools	Visual Studio Code, Jupyter Notebook, MySQL, GitHub, Seaborn, Matplotlib, Tableau, Google Looker Studio.
Language	Bahasa (Native), English (Intermediate).
